

Write a short description of your data and the story that you want to tell with it. Describe the design process, and for each step all your design choices.

With this visualization one can easily see the population of countries and its age and gender distribution. It is possible to, for instance, see the relation between topographical location/total population and age/gender distribution. The distributions are shown in pie charts. This is a nice way to view the relative proportions of the groups. Colors for the world map are a single hue red to make it clear which color represents a bigger or smaller value. For the age distribution pie chart is chosen for clearly distinguishable and easy-to-the-eye colors. For the gender distribution is chosen for pink/blue colors to match the female/male gender. To show the actual percentages of the pie chart groups, one can easily hover over it with the cursor and the percentage will be shown in the chart.
